Fall 14 CS Self-Pace Orientation Quiz

Levon Dovlatyan, SI: 24451552

1. What is your previous programming experience? Are you awaure these courses have pre-reqs? and please explain what other CS courses you have taken to prepare you for your self-pace course.

The majority of my programming experience has been with Java, Python, and Matlab. I have taken courses in Java and Matlab, and spent all of this summer writing software in Python for a summer internship program. Yes, I am also aware that there are pre-reqs for the course.

2. Briefly explain your strategy for doing your course work this semester. For example do you plan to use time on Sundays to do your programs for the class? Please verify you know that waiting until the last weeks of school to finish the bulk of your work has proven to be an unsuccessful strategy for passing our courses

I plan allocate certain days of the week to work on this course just like I would with any other course. I do not plan to finish everything the last few weeks of the semester, but will work on assignments and quizzes at a normal pace similiar to the way 'normal classes' work.

3. What comes first, the program or quiz taking?

Finish the program before you start the quiz.

4. What is the wait time between quiz retakes?

Two days.

5. What are our center's hours this semester?

The center's hours are Monday-Thurs 11-5, Fri 12-4.

6. Do we recommend continuing to work on programs even if you are stuck on a quiz?

Yes!
